Language Studio > Sentiment and opinion mining tryout

Analyze sentiment and opinions   ✕
Version 2023-04-01

The Text Analytics API's Sentiment Analysis feature provides sentiment labels (such as "negative", "neutral" and "positive") and confidence scores at the sentence and document-level. You can also send Opinion Mining requests using the Sentiment Analysis endpoint, which provides granular information about the opinions related to words (such as the attributes of products or services) in the text.
